ABSTRACTED-PUB-NO: JP 04319433A

BASIC-ABSTRACT:

Plate having high workability comprises a substrate layer of steel plate or plated steel plate, a 50-700 micron-thick intermediate layer of foaming resin contg. a foaming agent expandable by heating it and an up to 100 micron-thick skin layer of thermosetting resin paint.

Pref. the vibration-controlling steel plate is prepd. by coating the surface of 0.3-1.2 mm-thick steel or plated steel plate with a 1-10 micron-thick adhesive (e.g., olefinic adhesive coupled with COOH or double bond, polybutadiene, polyamide, epoxy adhesive, etc.), dry coating the adhesive surface with 60-700 micron dry thick-foaming resin sheet in the form of molten resin, powder, paint or film and then with up to 100 micron-thick thermosetting resin and heating the laminated steel plate at a temp. = up to the decomposition temp. of foaming agent. The press-worked steel sheet is heated to foam the foaming layer.

USE/ADVANTAGE - The vibration-controlling steel plate is prepd. economically. The damping sheet of complicated structure such as ceiling, floor, etc. of a motor car is prepd. easily with high productivity. It has a lightweight and high heat and sound insulation. It is used as ceiling, floor of a motor car, housings of household electrical appliances, building materials for ceiling, wall, floor, etc..
